

Improve Staff Response Times

Butler XP creates a simple and quick solution for guests to request service.

Boost efficiency and productivity

Communication is key for organizations to stay responsive, productive, and efficient. The Butler XP push-button transmitter is durable and weatherproof and can also be affixed outdoors to accommodate a variety of venues. The Butler XP allows guests the flexibility to request assistance from staff with a simple button press.

Empower Guests

Make it easy for guests to request service. Waterproof push-button notification devices may be firmly affixed to outdoor furniture, giving customers the means to notify staff when they need immediate attention.

Improve Responsiveness

Push-button notification systems broadcasts the exact location a guest is requesting attention. Staff then receive a silent page and respond immediately. Customers are given prompt assistance.

Enhanced Productivity

Give your staff the tools they need to improve the guest experience. Be smarter about who needs service, where to go, and attend to guest needs quickly.

HOW IT WORKS

- 1 Request**
Guests can request staff assistance by pressing the button on the Butler XP.
- 2 Locate**
Staff will receive an alert on a pager advising them assistance is needed along with the guests' exact location.
- 3 Respond**
Staff responds immediately, thereby improving response time and productivity while elevating the customer experience.

"The push-for-service system by LRS has tremendously improved our speed of service and frequency of orders."

Marc Vaccaro, Assistant F&B Director | Grand Hyatt Tampa Bay
